Equations that are neither elliptic nor parabolic do arise in geometry (a good example is the equation used by Nash to prove isometric embedding results); however many of the applications involve only elliptic or parabolic equations.

In some situations, these modeling lead us to partial differential equations, the most common type of are, elliptic, parabolic, and hyperbolic equations. These equations play a substantial role in understanding problem related to flow, heat motion of free fall body and at microscopic level motion of

Applications of Lie's Theory of Ordinary and Partial

Lie's group theory of differential equations unifies the many ad hoc methods known for solving differential equations and provides powerful new ways to find solutions. The theory has applications to both ordinary and partial differential equations and is not restricted to linear equations. Applications of Lie's Theory of Ordinary and Partial Differential Equations provides a concise, simple
