Fussy mitochondria fuse in response to stress

Hoppins et al, (2007). Mitochondrial fusion facilitates the redistribution of mitochondria in response to local changes in the demand for ATP and it allows for disposal of faulty mitochondrial fragments through mitophagy, whereas mitochondrial fusion promotes exchange of mtDNA and other vital components, thus reinvigorating the mitochondrial network. Mitochondrial fusion and fusion

Mutations in the SPG7 gene cause chronic progressive

It is unclear whether the paraplegin defects in these patients would have directly caused the elevated OPA1 levels, as previous work in animal models indicated that abnormal paraplegin is not sufficient to alter OPA1 metabolism (Duvezin-Caubet et al., 2007; Ehses et al., 2009).

Under adverse conditions, OPA1 is proteolytically inactivated by the actions of an as yet unknown protease (Gripatic et al, 2007). This proteolytic inactivation occurs during apoptosis, but it also occurs when certain scaffolding proteins called prohibitins are not around (Merkwirth et al, 2008).

The PERK Arm of the Unfolded Protein Response Regulates

The ribosomal inhibitor cycloheximide (CHX), a compound that potently activates SIMH by promoting mitochondrial fusion (Tondera et al., 2009), increases the population of MEF mtGFP cells containing elongated mitochondria to the same extent observed in Tg-treated cells (Figures 1C and S1B).

Mechanisms of Mitochondrial Fission and Fusion

However, mammalian cells also have an S1 site, which is present in all isoforms and is only cleaved when mitochondria lose membrane potential, have low levels of ATP, or lose some of the other quality-control mechanisms (mutations in the AFG3L2 protease or the Prohibitin chaperone) (Baricault et al. 2007; Merkwirth et al. 2008; Ehses et al. 2009).

New insights into the role of mitochondria in aging

(Hutter et al., 2007). This has resulted in much controversy regarding the idea that mtDNA mutations contribute to aging through increased ROS production and enhanced levels of oxidative stress in mitochondria. However, it is possible that the accumulation of mtDNA mutations that occur with age leads to alterations in cell-signaling pathways that can induce cell dysfunction and initiate

Fussy mitochondria fuse in response to stress The EMBO

In unstressed cells, certain isoforms of OPA1 are constitutively cleaved by the mitochondrial intermembrane space AAA protease YME1L (Griparic et al, 2007; Song et al, 2007). This cleavage

removes the amino terminal transmembrane segment to generate a short form of OPA1 (S OPA1). Isoforms that are not cleaved by YME1L retain their amino terminal transmembrane segment and are called the long

Cancer Cell Metabolism Warburg and Beyond ScienceDirect

Transported by several monocarboxylate transporters, lactate may be shared and metabolized among cells, although the idea is still controversial (Hashimoto et al., 2006, Yoshida et al., 2007). The interconversion of lactate and pyruvate might alter the NAD⁺ /NADH ratio in cells, and lactate exchange may serve to coordinate the metabolism of a group of cells.
